

# ARMORY AGENT FOR KUBERNETES

A plugin to simplify large scale Kubernetes management in Spinnaker

## ✓ IMPROVE PERFORMANCE

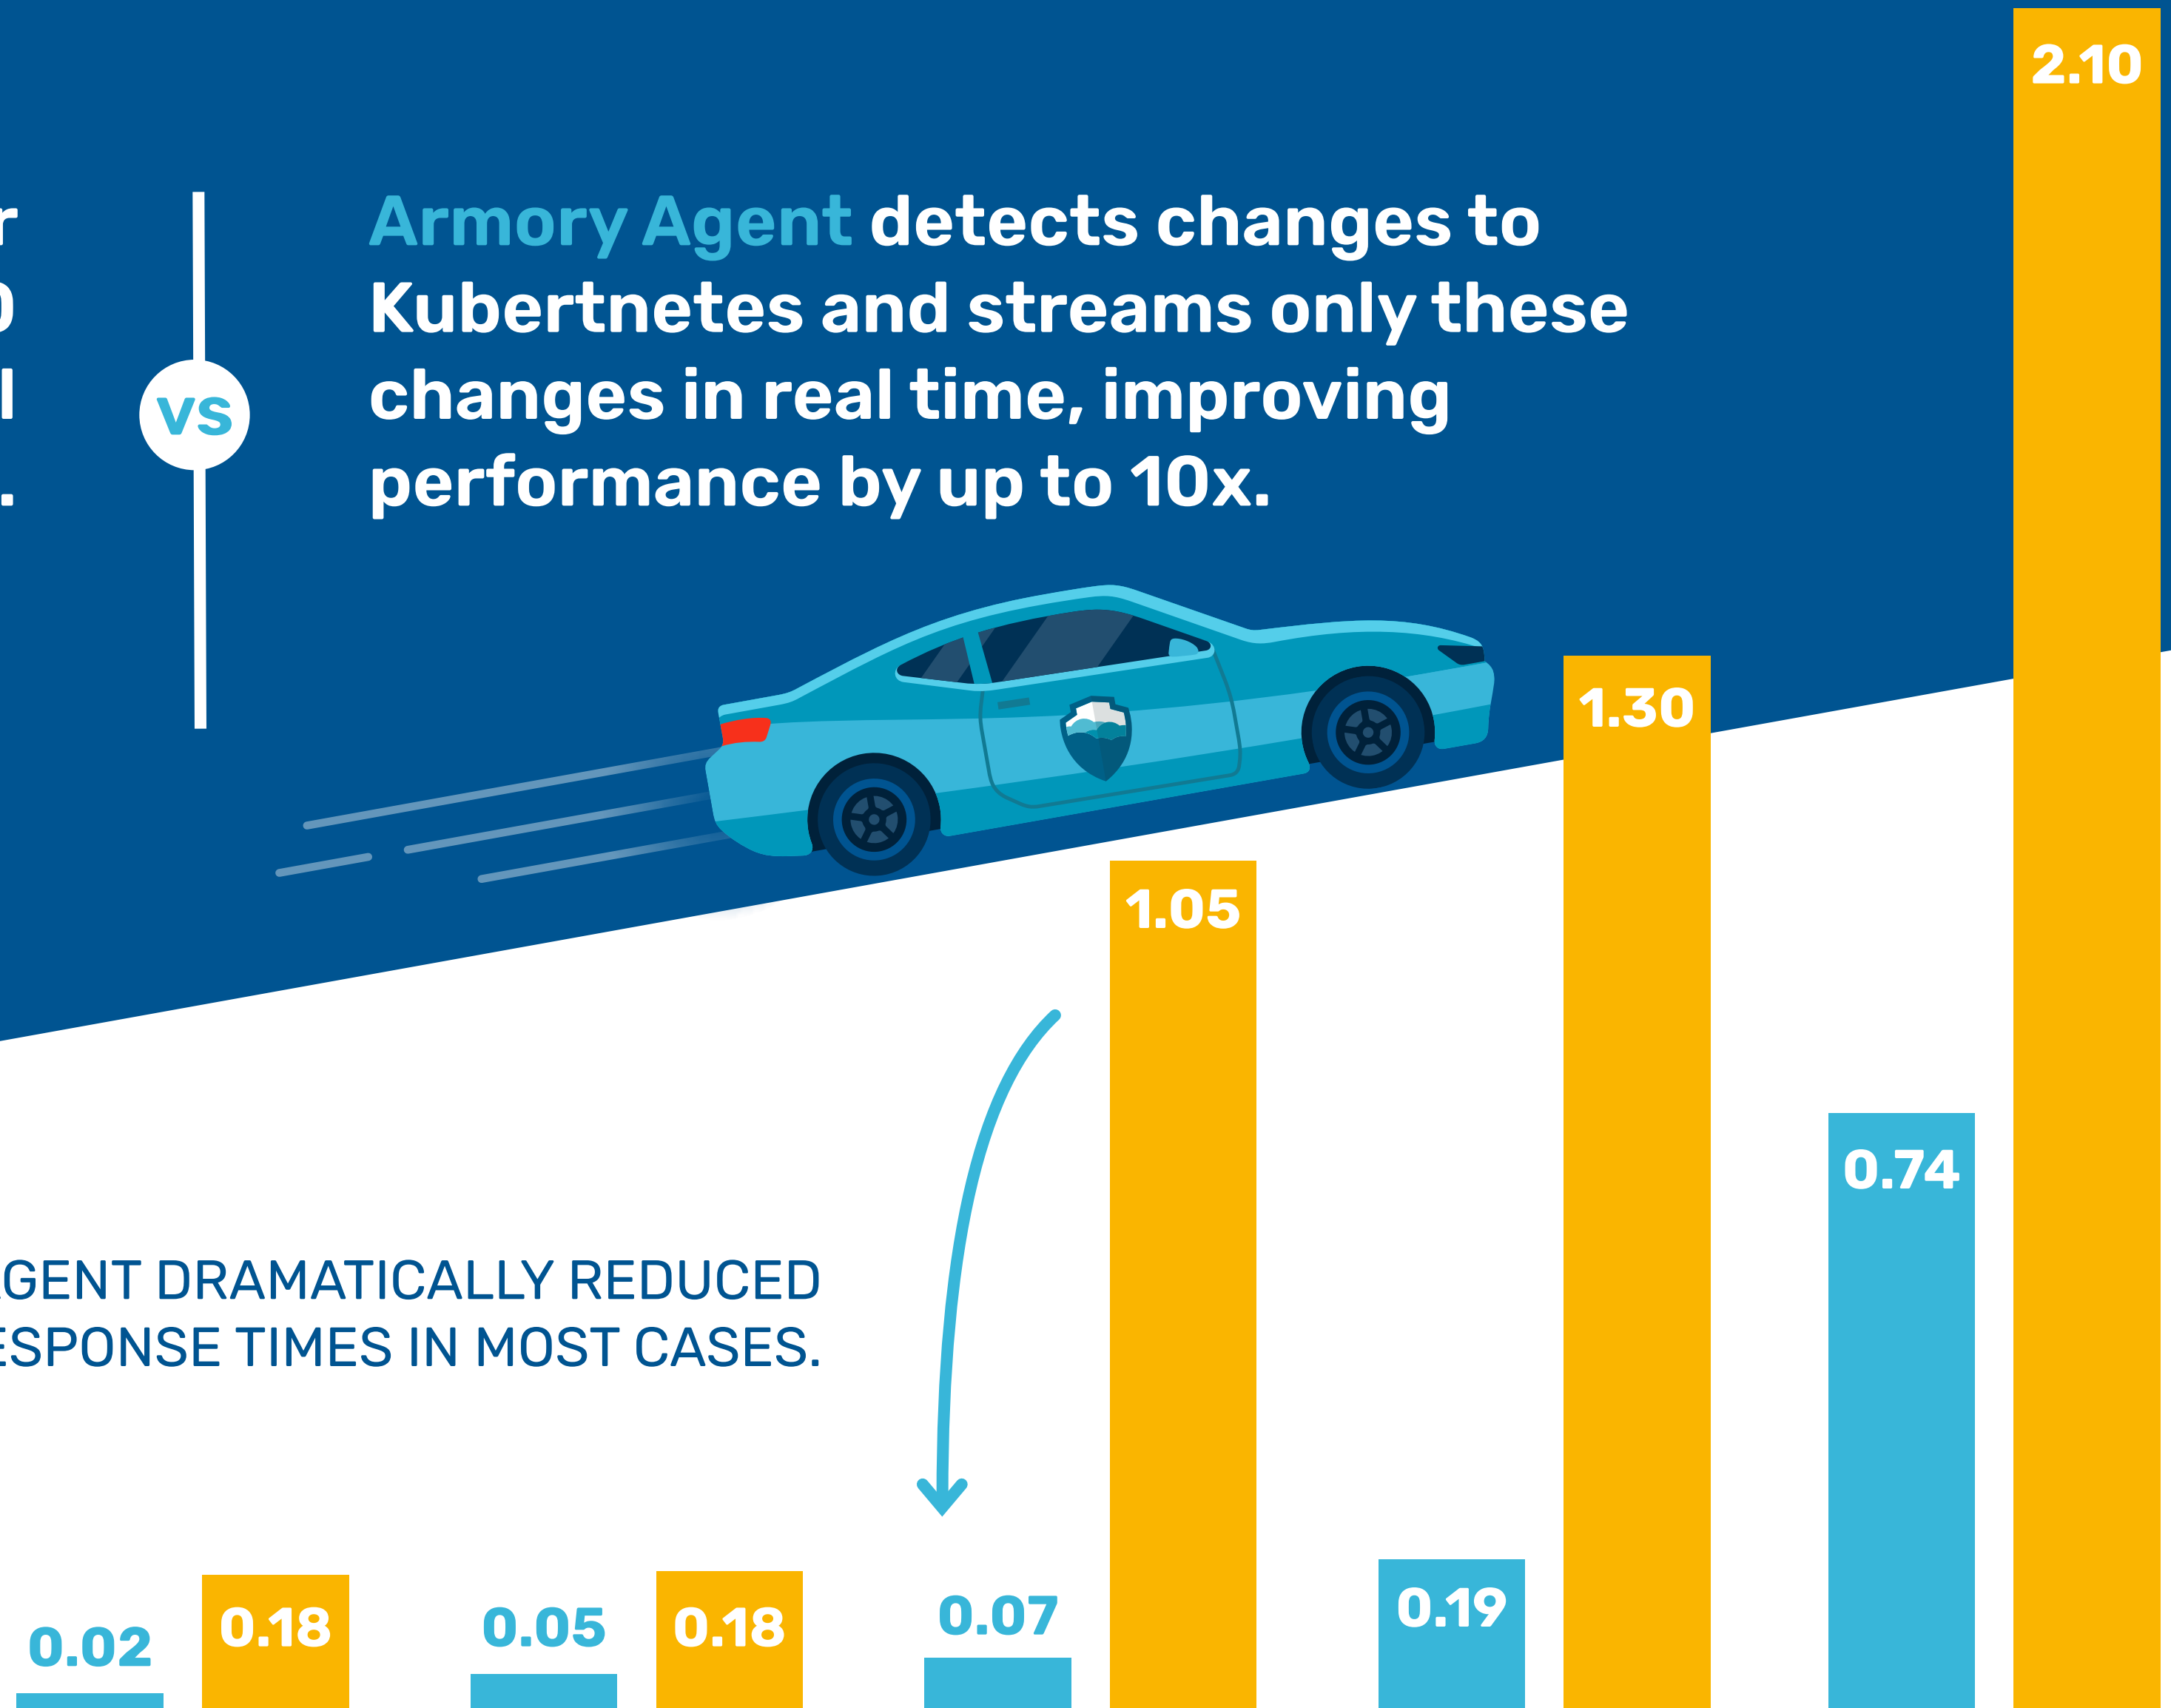

**Spinnaker** polls and caches all your Kubernetes resources every 30 seconds, causing suboptimal performance and crashes.

vs

**Armory Agent** detects changes to Kubernetes and streams only these changes in real time, improving performance by up to 10x.

ARMORY AGENT DRAMATICALLY REDUCED RESPONSE TIMES IN MOST CASES.

## ✓ BREAK BOTTLENECKS

**Spinnaker** uses a centralized model for all Kubernetes service accounts and credentials.

vs

**Armory Agent** uses a decentralized model that manages each Kubernetes cluster from within.

## ✓ PROTECT SECRETS

**Spinnaker** consumes all Kubernetes service accounts and their permissions.

vs

**Armory Agent** decouples Kubernetes service accounts from applications and keeps API servers private.
